# 9. Specification of Packaging

9.1 Appearance and Dimensions of plastic tape (8mm-wide)

### 9.2 Specification of Taping

- (1) Packing quantity (standard quantity)
- 3,000 pcs / reel
- (2) Packing Method
- Products shall be packed in the each embossed cavity of plastic tape and sealed by cover tape. (3) Sprocket hole
  - The sprocket holes are to the right as the tape is pulled toward the user.
- (4) Spliced point

Plastic tape and Cover tape has no spliced point.

- (5) Missing components number
  - Missing components number within 0.1% of the number per reel or 1 pc., whichever is greater, and are not continuous. The Specified quantity per reel is kept.

### 9.3 Pull Strength

Plastic tape	10N min.
Cover tape	5N min.

### 9.4 Peeling off force of cover tape

Speed of Peeling off	300mm / min	165 to 180 degree F Cover tape
Peeling off force	Plastic tape: 0.1N to 0.7N	
	(minimum value is typical)	

Plastic tape

### 9.5 Dimensions of Leader-tape, Trailer and Reel

There shall be leader-tape (cover tape) and trailer-tape (empty tape) as follows.

MURATA MFG.CO., LTD

### Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- (1) Aircraft equipment
- (2) Aerospace equipment
- (3) Undersea equipment
- (4) Power plant control equipment
- (5) Medical equipment
- (6) Transportation equipment (vehicles, trains, ships, etc.)
- (7) Traffic signal equipment
- (8) Disaster prevention / crime prevention equipment
- (9) Data-processing equipment (10) Applications of similar complexity and /or reliability

requirements to the applications listed in the above

### 11. Notice

This product is designed for solder mounting. Please consult us in advance for applying other mounting method such as conductive adhesive.

### 11.1 Land pattern designing

### 11.2 Flux, Solder

·Use rosin-based flux.

Don't use highly acidic flux with halide content exceeding 0.2(wt) % (chlorine conversion value).

- Don't use water-soluble flux.
- ·Use Sn-3.0Ag-0.5Cu solder.
- Standard thickness of solder paste:  $100 \,\mu$  m to  $150 \,\mu$  m.

P.5/8

### 11.3 Flow soldering / Reflow soldering conditions

• Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 150°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.

Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of products quality.

• Standard soldering profile and the limit soldering profile is as follows.

The excessive limit soldering conditions may cause leaching of the electrode and/or resultingin the deterioration of product quality.

### Soldering profile

(1) Flow soldering profile

	Standard Profile	Limit Profile
Pre-heating	150°C, 6	0s min.
Heating	250°C, 4s∼6s	265°C±3°C, 5s
Cycle of flow	2 times	2 times

(2) Reflow soldering profile

P.6/8

### 11.4 Reworking with soldering iron

The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°C, 1 min
Tip temperature	350°C max.
Soldering iron output	80W max.
Tip diameter	$\phi$ 3mm max.
Soldering time	3(+1, -0)s
Time	2 times

Note : Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

### 11.5 Solder Volume

·Solder shall be used not to be exceeded the upper limits as shown below.

• Accordingly increasing the solder volume, the mechanical stress to Chip is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

#### **11.6 Product's location**

The following shall be considered when designing and laying out P.C.B.'s.

(1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board.

(2) Products location on P.C.B. separation

Seam

0000

в

Slit

Products shall be located in the sideways direction (Length: a(b) to the mechanical stress.

Products (A, B, C, D) shall be located carefully so that products are not subject to the mechanical stress due to warping the board. Because they may be subjected the mechanical

stress in order of  $A>C>B\cong D$ .

#### **11.7 Cleaning Conditions**

Products shall be cleaned on the following conditions.

(1) Cleaning temperature shall be limited to 60°C max. (40°C max for IPA.)

ГC

Length:avb

0000

D

- (2) Ultrasonic cleaning shall comply with the following conditions with avoiding the resonance phenomenon at the mounted products and P.C.B.
  - Power : 20 W / I max. Frequency : 28kHz to 40kHz Time : 5 min max.
- (3) Cleaner

1. Alcohol type cleaner Isopropyl alcohol (IPA)

- 2. Aqueous agent
- PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning. In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
- (5) Other cleaning Please contact us.

#### 11.8 Resin coating

The inductance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating/molding products. So please pay your careful attention when you select resin.

In prior to use, please make the reliability evaluation with the product mounted in your application set.

P.7/8

### 11.9 Caution for use

There is possibility that the inductance value change due to magnetism. Don't use a magnet or a pair of tweezers with magnetism when chip coil are handled. (The tip of the tweezers should be molded with resin or pottery.)

### 11.10 Magnetic Saturation

When the excessive current over rated current is applied, the inductance value may change due to magnetism.

### 11.11 Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

Bending

Twisting

### 11.12 Storage and Handing Requirements

(1) Storage period

Use the products within 6 months after delivered.

Solderability should be checked if this period is exceeded.

(2) Storage conditions

• Products should be stored in the warehouse on the following conditions.

Temperature : -10°C to 40°C

Humidity : 15% to 85% relative humidity No rapid change on temperature and humidity

Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.

• Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.

· Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

• Products should be stored under the airtight packaged condition.

(3) Handling Condition

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

# 12. <u>/</u> Note

- (1) Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- (2) You are requested not to use our product deviating from the reference specifications.
- (3) The contents of this reference specification are subject to change without advance notice. Please approve our product specifications or transact the approval sheet for product specifications before ordering.
